

ZentrumHub API Certification

1. Introduction

This document certifies that the API has been tested and meets the required standards for usage in live accounts.

2. Certification Process

The **Certification Process** outlines the step-by-step interaction between the API and the system to complete a hotel booking.

Each step should be validated with the required artifacts as mentioned in subsequent sections.

Search and Booking Scenarios

- Search and Book for **1 Room [2A], 1 Night**
- Search and Book for **2 Rooms [2A-1C and 1A-2C], 2 Nights**

Perform above mentioned 2 bookings and provide BookingId and CorrelationId along with artifacts mentioned in subsequent sections

Disclaimer

Kindly submit all artifacts within five days of your search, as the certification logs are only retained for the past five days in our system.

3. Search Page

Key Validation Scenarios

- Display total charges to be collected from user.

Artifacts

- Provide a screenshot of the UI and logs for the same hotel to verify the data.
- Provide CorrelationId.

4. Hotel Details Page

Key Validation Scenarios

- Display the Board Basis.
- Display the cancellation policy and refundability tag.
- Display total charges to be collected from user with price breakdown.
- Display charges to be paid at property separately within the price breakdown.
- Ensure that all standardized rooms are displayed.
- Verify that all recommended rates are displayed.

Artifacts

- Provide a screenshot of the UI Hotel Details Page and `/roomsandrates` api logs showing the same selected room and rate.
- Provide CorrelationId.

5. Checkout Page

Key Validation Scenarios

- `/price` api should be called before the checkout page loads.
- Ensure selected rates from the Hotel Details Page appear correctly on the Checkout Page.
- Display the Board Basis.
- Display the cancellation policy and refundability tag.
- Display total charges to be collected from user with price breakdown.
- Display charges to be paid at property separately within the price breakdown.
- Display price change to user.

- If more than 2 rates are received in API response, ensure that you are displaying the total amount by adding the “*totalRate*” component of each rate.

Artifacts

- Provide a screenshot of the UI Checkout Page and */price* api logs showing the prices.
- Provide CorrelationId.

6. Booking Confirmation Page

Key Validation Scenarios

- Display the cancellation policy on the confirmation page.
- Display hotel policies
- Ensure that you have handled the Booking timeout. Details are available in our documentation under section - [What should I do in case of a timeout error or non-confirmed booking status?](#)

Artifacts

- Provide a screenshot of the Booking Confirmation Page.
- Provide the actual booking voucher/confirmation email sent to customer
- Provide */book* api logs along with BookingId and CorrelationId.

7. Post Booking

Key Validation Scenarios

- Display the Board Basis.
- Display the cancellation policy and refundability tag.
- Display total charges to be collected from user with price breakdown.
- Display charges to be paid at property separately within the price breakdown.
- Display price change to user.

Artifacts

- Provide a screenshot of the Booking Details Page and */getBookingdetails* api logs.

8. Cancel Booking

Key Validation Scenarios

- Ensure that the booking can be successfully canceled.
- Verify the booking status post-cancellation.

Artifacts

- Provide a screenshot of the canceled booking and */cancel* api logs.
- Provide CorrelationId.

9. Technical Requirements

This section outlines the **mandatory headers** and **required fields** for different API requests.

Autosuggest

- Are you utilizing our Autosuggest feature? (Y/N)
- If yes, ensure that you call the ZH API after the user inputs at least three letters.
- Verify the ability to search for various location types, including countries, states, cities, airports, popular destinations, and hotels.

Mandatory Headers in All API Calls

Each API request must include the following headers:

- **Account Id:** Identifies your Account in the ZentrumHub system.
- **API Key:** Unique key that grants you access to the API.
- **Customer IP:** The user browser's IP address.
- **Correlation Id:** Unique identifier for tracking API requests. This should remain constant throughout the entire booking process

This document serves as an official certification that the API has met all necessary criteria.
