Introduction

We propose the development of an AI-powered conversational travel guide mobile application that leverages large language models (LLMs) such as ChatGPT/DeepSeek or other LLMs platforms to provide a new way of planning and experiencing travel.

The app will allow users to chat naturally with AI to create, save, and edit personalized itineraries. By analysing user profiles, interests, hobbies, and behaviour patterns, the AI will deliver highly customized travel recommendations. The advanced backend system will maintain full control over itinerary generation, ensuring compliance with data policies, standard restrictions, and user experience guidelines.

This solution is designed to save time, enhance personalization, and transform travel planning into a seamless, enjoyable experience.

Confidentiality Statement

This document is the copyright-protected property of **Ecogo Software Solutions Private Limited**. It has been prepared exclusively for **Mr. Mohammed Hassan** and is intended for internal business use only.

This proposal contains commercially sensitive and proprietary information. It must not be disclosed, copied, or shared with any third party without the **prior written consent of Ecogo Software Solutions Pvt Ltd and Mr. Mohammed Hassan**.

Any unauthorized disclosure, distribution, or use of this document may result in legal consequences, financial penalties, and/or disciplinary action.

Key Features

Conversational AI Travel Planning

- Users interact directly with AI for travel planning.
- Conversational style eliminates complex search or manual input.
- Real-time itinerary suggestions with flexibility to save and modify.

Intelligent User Profile & Analysis

- User Profile Creation: During onboarding, users set up profiles including demographics, interests, hobbies, and travel styles.
- Continuous refinement of recommendations to match customer prompts and profile preferences.
- Tailored Itineraries: Every itinerary is aligned with the traveller's unique personality, interests, and budget.

Smart Itinerary Management

- Create, save, retrieve, and edit itineraries anytime.
- Dynamic re-planning based on weather, events, or user preference changes.
- Collaborative trip planning for groups.

Backend Control & Governance

- Advanced backend enforces restrictions, data usage policies, and AI response limits.
- Full control over itinerary generation logic, ensuring quality, compliance, and safety.
- Role-based access for system administrators with complete interaction logging.

Real-Time Travel Assistance

- AI-powered translation for real-time multilingual conversations.

Superior User Experience

- Mobile-first, intuitive design with modern UI/UX.
- Personalized dashboard showing itineraries, preferences, and upcoming trips.
- Offline caching of itineraries and maps for low-connectivity scenarios.

System Modules

User Module

- Registration & login (Email, Social, OTP).
- Profile setup: demographics, interests, hobbies, budget preferences.
- AI-driven analysis of user profile & preferences for personalized planning.

LLM Integration Module

- Conversational interface powered by ChatGPT/DeepSeek.
- Configurable prompts and rules for guided itinerary planning.
- Restrictions to ensure safe, relevant, and compliant responses.

Itinerary Planner & Manager

- AI-driven creation of day-wise itineraries.
- Save, open, and modify itineraries as needed.
- Backend override to enforce rules and standard features.

Admin & Control Dashboard

- Manage user data, preferences, and AI interactions.
- Monitor and log all conversations for quality and compliance.
- Advanced analytics: user interest patterns, popular destinations, travel trends.

Technology Stack

- **Frontend (Mobile App):** Flutter/React (iOS & Android).
- **Backend:** Python (FastAPI) / Node.js (microservices).
- **LLM Integration:** ChatGPT, DeepSeek, or similar APIs.
- **Database:** PostgreSQL (profile & itinerary storage), Redis (real-time caching).
- **Cloud Infrastructure:** AWS/GCP/Azure with Kubernetes.

Benefits

- Personalized Travel Planning – Itineraries built around user profiles, hobbies, and interests.
- Natural Interaction – Users simply chat with AI to plan trips.

- Backend Governance – Full control over AI outputs, ensuring compliance and quality.
- Enhanced UX – Intuitive, mobile-app design with advanced usability.

Implementation Timeline

Phase	Duration	Deliverables
Requirement Gathering & Design	2 weeks	Wireframes, AI interaction flows, profile setup UX
Backend Development & LLM Integration	6 weeks	Profile analysis, AI rules, admin dashboard
Mobile App Development	8 weeks	Flutter app with conversational AI & itinerary manager
Testing & QA	2 weeks	Functional, AI personalization, compliance testing
Deployment	1 weeks	Launch on App Store & Play Store
Ongoing Support	Continuous	Updates, new modules, bug fixes

Total Duration: 19-24 weeks (MVP release).

Future Enhancements

- Voice AI Assistant – Voice-driven trip planning.
- AR/VR Previews – Virtual destination previews.
- Wearable Integration – Notifications on smart devices.
- Marketplace Integration – Direct booking through partners.

Commercials

In consideration of the provision of the Services and all other activities and services to be provided by Ecogo under this SOW, CUSTOMER shall pay Ecogo the fees set out below.

Item	Qty	Amount (USD)
AI-Powered Conversational Travel Guide Mobile Application (Android & IOS)	1	USD 4600.00
Sub Total		USD 4600.00
Total		USD 4600.00

Payment Terms

- Project Initiation: 40% advance payment upon signing the agreement.
- Design & Development Phase: 30% payment upon completion of core development milestones (LLM integration, itinerary manager, and profile analysis modules).
- Testing & Pre-Deployment: 20% payment after successful QA and UAT completion.
- Final Deployment: 10% payment upon release to App Store/Play Store.
- Support & Maintenance: Annual maintenance billed separately at the start of each contract year.

Exclusions

The following are not included in the project scope unless agreed separately:

1. Third-Party Costs:
 - API fees (LLMs, travel, weather, events, maps).
 - Cloud infrastructure and hosting charges.
 - App Store / Play Store developer account fees.
2. New Feature Requests:
 - Any additional features not listed in the agreed scope will be considered as change requests and will be billed separately.
3. Third-Party Service Disruptions:
 - Any downtime, changes, or failures from external providers (LLMs, APIs, hosting providers) are outside our control and not covered under warranty.

4. Warranty Scope:

- Warranty covers only system bugs and implementation issues for the contracted scope.
- Excludes API changes, version upgrades, third-party package dependencies, or external service failures.

Warranty & Change Requests

- A warranty period of 3 months from the date of deployment is included, covering bug fixes and system errors directly related to the implemented scope.
- Warranty excludes issues caused by third-party APIs, version upgrades, hosting/cloud infrastructure, or external service disruptions.
- Change requests beyond the agreed scope will be estimated separately.
- The standard charge for additional software development is INR 1,200.00 per hour.

Conclusion

This proposed AI-powered conversational travel guide mobile app will deliver an intelligent, personalized, and user-centric travel experience. By combining LLMs for natural conversation, user profile analysis for behaviour-driven personalization, and robust backend governance, the solution ensures travellers enjoy itineraries that truly match their interests, hobbies, and lifestyle.

The platform is designed to be future-ready, scalable, and adaptable, positioning it as a market-leading solution in the travel technology domain.
